

Nitelze™ Figure 9 Instructions

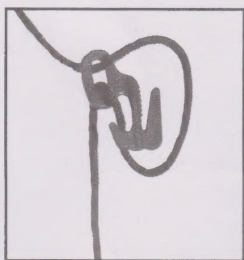

Thank you for purchasing a Kelty tent/shelter. Included with your new tent/shelter are Nitelze™ Figure 9's that make guying your tent/shelter a easy and secure process. Below are the instructions for how to use your new Figure 9.

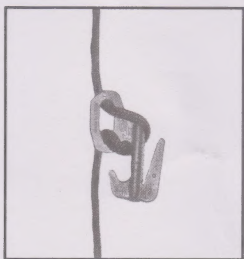

Nitelze™ Figure 9 Parts

- A.** Make a loop in your guy line and pass it through the eyelet opening.

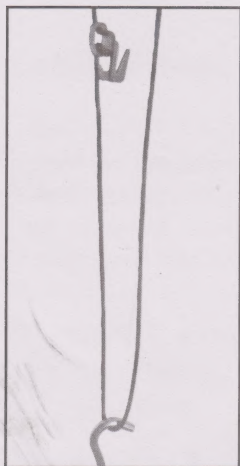

- B.** Pass the loop over the front side of the Figure 9 by increasing the slack of the loop to the backside as shown.

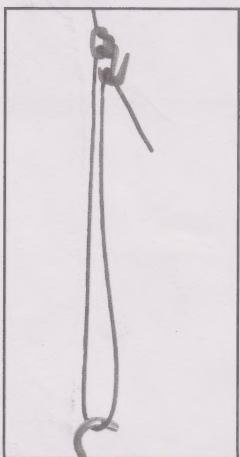

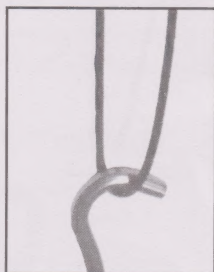

- C.** Tension the loop against the eyelet opening as shown. Make sure the cord is positioned in relation to the stem as shown. If you need to adjust the position of the Figure 9, add or remove tension to the guy line and inch the Figure 9 up or down the guy line to the desired position.

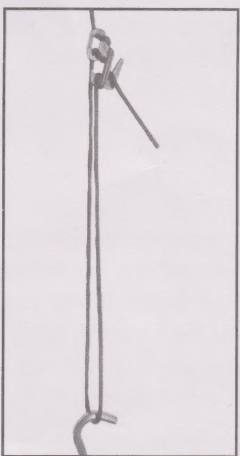

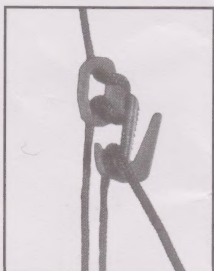

continued on back

- D.** Loop the guy line around the stake that you've hammered into the ground as shown. See C above for adjusting the position of the Figure 9 on your guy line.

- E.** Pass the guy line behind the Figure 9 and over the hook end. To adjust and add tension, pull down toward the stake on the guy line.

- F.** After adjusting the tension, lock the guy line off by passing the guy line behind the Figure 9 and then into the gripper teeth as shown. Repeat B through F above on all of your guy lines.
